

Technical Data Sheet

Neodymium Disc Magnets, N35, Plated, High Temp

Neodymium magnets are part of the Rare Earth magnet family and are the most powerful permanent magnets in the world. They are referred to as NdFeB magnets, or NIB, because they are composed of Neodymium (Nd), Iron (Fe) and Boron (B). Bring on the Heat! These magnets can safely be used at operating temperatures up to 300° Fahrenheit (149° Celsius) – depending on the magnetic circuit. Call for technical advice. These can be used in oil filters – to separate any iron fillings or metal chips.

Product Specifications

Shape:	Disc
Tolerance:	.005
Material:	NdFeB
Plating:	Ni
Max. Operating Temperature:	300°F/149°C
Br. Max:	12150
BH Max:	35

Part No.	Diameter	Thickness	Holding Force(lbs)	Price
N35P375100HT	0.375	0.100	2.8	\$1.60

- All Measurements are in inches (unless otherwise noted)
- Direction of Magnetization (DOM) is through the thickness unless noted
- Unless otherwise specified, magnets will be furnished in magnetized condition
- Holding forces are approximate. These are average values obtained under laboratory conditions. Size, shape, and material of the test piece may affect actual pull forces
